

Francis W. Makokha
Head: Human Health Research Program
M.Sc: Molecular Medicine
makokhafw@gmail.com

The Human Health Research program is mandated to coordinate biomedical research in its wide perspective. It encourages faculty and their collaborators to develop research proposals the focus on infectious diseases, non-communicable diseases (NCDs), nutrition and mental health.

Expertise : Molecular Medicine; Molecular Biology, Molecular Genetics, Bioinformatics, Molecular Immunology. Have taught units in these fields at university level

Current Research Interests:

Malaria Research-	Drug resistance in <i>P. falciparum</i> , Variant parasite molecules genes
Cancer Research-	Collating of baseline data, Gene expression profiling; microRNA analysis and signal transduction ; augmenting current cancer drugs with interleukins
Previous Encagement:	Lecture, Department of Biochemistry and Biotechnology, Technical University of Kenya
